Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 31, 2005 has been entered.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicants' arguments and Declaration of January 31, 2005 in combination with the data presented in Table 2 of the specification have been fully considered and found to be persuasive to overcome the prior art rejections. In particular, the language of "for compatibilization of the natural magnesium hydroxide with the polymeric components" is functional language that must be evaluate and considered just like any other limitation of the claims, for what it fairly conveys to a person of ordinary skill in the pertinent art in the context in which it is used. The examiner's position remains that hydrolysable organic silanes are known coupling agents and thus has reason to believe that this functional limitation, asserted to be critical for establishing novelty in the claimed self-extinguishing cable, may in fact, be an inherent characteristic of the prior art. The teachings of Betso et al clearly support the examiner's position. However, Betso also recognizes that

hydrolysable silanes can be used to crosslink compositions and provides direction to the skilled artisan to adjust the amount of coupling agent to generate the amount of coupling or grafting desired without jeopardizing the nature of the composition when crosslinking is not desired. Applicants' arguments and Declaration have been found to be persuasive with respect to the teachings of Sonoda et al in that Sonoda's use of the hydrolysable silane is to impart crosslinking to his composition. There is no clear reason, motivation or suggestion to modify or adjust the amount of silane in the composition of Sonoda so as to maintain its presence while not imparting appreciable crosslinking to his composition. Moreover, applicants' data in Table 2 of the specification shows superior flexibility properties of the present claimed composition as evidenced by the elongation at break.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
